

Important: Otter Series Direct Android Connection Risks Explanations

Regarding Otter series Scanner not supporting direct connection to Android phones

Dear Otter Users,

To ensure the safe use of your device, we need to inform you of the potential risks associated with directly connecting the Otter series Scanner to a smartphone via a Type-C cable, along with our solutions:

Scanner that support direct connection

Support: Otter Lite

Not support: Otter; Otter Lite Basic

Risk Advisory

When using a Type-C cable to power and transfer data for the Otter Scanner via a smartphone (i.e., OTG mode):

1. Dual Workload Pressure

The smartphone must simultaneously handle power supply (5V/500-900mA, the maximum power supply capacity of most mainstream smartphones) and data transmission, exceeding normal operational limits.

2.High Power Consumption of the Scanner

Average Current Demand: 5V/990mA

Instantaneous Peak Current: 5V/2700mA (far exceeding the continuous power supply capacity of smartphones)

3.Long-Term Risks

Prolonged overload operation may cause:

- ① Accelerated aging of smartphone motherboard components
- ② Significant reduction in battery cycle lifespan
- ③ Overload risks in extreme scenarios (short circuits, overheating, or fire hazards)

Technical Limitations & Protective Measures

Based on the above risk assessments:

1.App Update

We have disabled the direct smartphone connection feature in the latest app version to eliminate potential safety risks.

2.Alternative Solution

Please **use the dedicated Scan Bridge accessory** to ensure stable power supply and secure wireless scanning.

Safety First, Experience Guaranteed

Thank you for your understanding and support! For further assistance, contact our customer service team or visit our **Support Center** <https://support.creality.com/?site=SCANNEREN>  .
